## Experience

|                                                |                    |
|------------------------------------------------|--------------------|
| <b>Persistent Systems</b>                      | Bangalore          |
| Project Lead                                   | Aug 2022 - Present |
| <b>Client: OneAdvanced — Dec'24 to Present</b> |                    |

The client has initiated a major modernization program to upgrade their legacy applications. My work is focused heavily on the **Vue.js ecosystem**, applying modern front-end practices across multiple projects.

**Project 2 (Performance & Talent – Clear Review)**, I am involved in modernizing the platform using Vue.js, Vue Router, and the proprietary MDS component library. As part of this modernization, I implemented form validation workflows using Vee-Validate and Zod schema to ensure data accuracy and a seamless user experience. We successfully delivered the Phase 1 release, enhancing both performance and UI consistency. I am currently working on the Phase 2 release, and the client has acknowledged my contributions and appreciated my work.

**Project 1 (Task Scheduler)**, I/team rebuilt the entire module using Vue.js, Vue Router, Pinia, PrimeVue, and the client's Mosaic Design System (MDS). I also implemented robust form validations using Vee-Validate and Zod schema. The project was completed in 3 months, and the client appreciated both the quality of delivery and the improved user experience.

## Persistent Projects: (In-house Projects)

- **Collaborative Development:** Collaborate closely with the presales and design teams to define project goals.
- **Dashboard Creation and Client Presentations:** Created dashboards for CXOs (executives), featuring various charts and crucial information tailored to business needs, using React.js. Utilized these dashboards for engaging and informative client presentations, highlighting the dynamic capabilities of React.js
- **Web Application Development:** Developed an internal web application using Next.js, Tailwind CSS, and a custom admin panel. Leveraged Next.js for building reusable components and ensuring high performance. Focused on optimizing applications for speed and scalability through code-splitting and lazy loading techniques.
- **Microsoft Power Platform Projects:** Worked on three projects using Microsoft Power Apps, Power Automate, and Power Pages to enhance workflow automation and app development capabilities.

- **UI and Feature Development:** Translated designs, wireframes, and functional specifications into front-end code. Developed new features based on client requests to improve user experience.
- **Optimization:** Focused on optimizing web pages for speed, scalability, and onsite SEO best practices to enhance search engine visibility.
- **Collaboration:** Worked with designers to ensure consistent layout design throughout projects.
- **Client Projects:** Worked for various clients like Economic Times, Dell, Multiples, Tata Coffee, Raymonds, Grey, Weikfield, House of Paws, Go Nutriline, SKH, Krishna Group, etc.
- **Mentorship:** Mentored junior team members to help them grow and improve their skills.
- **Additional Tasks:** Created responsive mailers, converted PSD designs into HTML for newsletters, and prepared reports and presentations.
- **Technology Used:** HTML, CSS/SCSS, Bootstrap, JavaScript, React, PHP, MySQL, Laravel, Photoshop.
- **CMS:** Worked on WordPress, Drupal, and OpenCart.
